

## Which E-bikes should you consider?

We advise a mix of different types of E-bikes to cover all the different needs of the users. A pool consisting of folding E-bikes, women's and men's E-bikes would be our recommendation. Also consider E-cargo bikes for employees who need to move goods such as heavy files or sales samples.

Folding bikes are great as they can be combined with trips using public transport or other vehicles. They can also be easily stored inside which means no outdoor storage solution needs to be installed.

## Equipment and accessories

We recommend the following accessories be included in the hire package:

- Gold standard locks - for insurance purposes
- Lights and reflectors
- Hi-visibility and reflective clothing
- Adjustable helmets
- Panniers
- Spare sets of keys and other equipment

Simply select what you need and we'll sort the rest.

## GPS

As an additional service we can fit GPS devices to the bikes. This will help you keep track of the E-bikes and provide an accurate mileage record. Just ask us for details.

## Insurance

The E-bikes and accessories will come with insurance against theft and damage whilst in use and your employees will be covered for their personal third-party liabilities.

## Cycle parking solutions

It would be wise to consider where you will locate the bike pool and how you will securely store the bikes when not in use. If required, we can help you source indoor and outside cycle parking solutions.

## Breakdown cover

Green Bike Pool will provide breakdown cover in case the bike cannot be used for the intended journey. This will usually involve a taxi being sent to recover the individual and the bike.

## Booking systems

The Green Bike Pool portal allows you to book the e-bikes in and out. Its easy to use and comes as part of the agreement. However, some organisations may prefer to use a paper-based diary system or use a shared electronic calendar. Use the solution which works best for you.

Woodlands, Berkshire, RG17 7TU

## What is an E-bike pool?

A workplace E-bike pool provides electric bikes for employees to use in the course of carrying out their work duties. Work related trips can include travelling to different office locations or to off-site meetings with clients or suppliers. You could also allow employees to commute to work on them so that they can get a feel for using an e-bike before making the commitment to buy their own.

## Why E-bikes?

The key to making your E-bike pool a success is to make it easy and accessible for all potential users. By using E-bikes, you are one step closer to making this possible.

With an E-bike you can sail over hills and cruise long distances, all because of the battery. This powers the bike, when you want it to, so whenever you feel the pedalling is becoming too challenging, simply activate the power and away you go. Riders do not get hot and sweaty meaning they can wear their usual business attire. Lycra is not required! E-bikes are great for employees with mobility issues, helping them feel included and able to use the E-bike pool.

## Why have an E-bike pool?

Rising costs and the time spent using taxis, cars and public transport, have led organisations to improve the transport options for their employees. Using E-bikes is much faster and cheaper in towns and cities. As well as the obvious cost efficiencies, there are significant health, wellbeing and environmental benefits too.

## Key advantages

- Reduce travel expenses for work journeys
- Quicker and more efficient journeys made in work time
- Improve staff physical and mental health helping to boost morale and performance
- Improve air quality in your local area
- Reduced demand for on-site car parking
- Enhance your organisation's CSR reputation

## Encouraging positive behaviour change

The overall aim of the bike pool is to help individuals and organisations to happily choose bikes over cars in their personal and business lives, with the desired outcome being a significant reduction in air pollution.

We believe that once someone has used a bike through the pool, they will start to view cycling as a viable and sustainable transport option, thus bringing about a change in their commuting habits.

By using the Green Bike Pool, you will be making a clear and visible statement that you care about the urban environment and your employees' health.

**A journey of three miles can be made in under 10 minutes on an E-bike**

## Save time and money

Your organisation can make significant savings; here is a simple example:

4 Mile Journey		
Taxi	30 mins	£20 each way
E-bike	15 mins	4p each way

## How the Green Bike Pool works

The Green Bike Pool is a complete turnkey solution. We've made the process easy; tell us what you want and our team will sort the rest.

1. Tell us how many bikes you need and any accessories that are required
2. We will source the items from a bike shop local to your offices
3. The bikes will be delivered to you and bike training arranged
4. We will help you to promote the scheme to your employees
5. Regular safety checks will be organized along with servicing
6. We will invoice you in 12 monthly payments
7. Your organisation will enjoy the benefits of using a Green Bike Pool
8. After 12 months, either return the bikes or renew the contract
